Abstract of JP1029843

PURPOSE: To promote the bleaching action of the titled material by effecting a bleaching processing or a bleach-fix processing of the titled material in the presence of a specified compd.

CONSTITUTION: The titled material is subjected to the bleach processing or the bleach-fix processing in the presence of the compd. shown by the formula. When in the formula, R1 is $\geq 3C$ substituting group, the bleaching effect of said compd. is remarkably improved. When R1 is $>20C$ substituting group, the solubility of said compd. itself is remarkably reduced. Therefore, the group R1 is specified to a substituting group having a carbon atom range of $\geq 3C$ and $\leq 20C$. Thus, the bleaching power of the titled material is improved in the bleach or the bleach-fix processing, without deteriorating another photographic characteristics.
